Description

Our Semi Vertical Bike Enclosure is a highly secure bike enclosure combined with our semi-vertical bike racks inside. The cycle enclosure is made of corrugated galvanised steel for the roof and steel mesh on all walls for added security. The enclosure comes with a steel mesh with a swing gate, equipped with a gate closing strut and a coded padlock as standard. This is a great product to bring down bike theft on your premises to a minimum.

Our Semi Vertical Cycle Enclosure is not just secure on the outside; it is also very practical and efficient on the inside. The enclosure houses 30 of our [Semi Vertical Bike Racks](#). They are designed to maximise the use of space and are made of excellent quality steel galvanised to BS EN ISO 1461 standard. This makes the semi-vertical racks durable and suitable for both indoor and outdoor use. These bicycle racks are also very versatile as they can accommodate any two-wheeled bike – including small children's bikes and BMX types. However, do keep in mind any user of this type of bike rack must be able to bear the whole weight of the bike as it needs to be lifted onto the rack.

This bike storage product was initially designed for a client and made bespoke, [get in touch](#) if you want us to make something similar for you too.

Options

The Semi Vertical Bike Enclosure comes with several options for finish. You can select a powder-coated colour in a RAL colour of your choice or have it hot-dipped galvanised. Alternatively, you can opt to have both and choose our combination add-on – hot dipped galvanised and powder coated in the colour of your choice.

Features

- Length 5370mm
- Width 4200mm
- Height 2100mm falling to 2000mm
